

SANCTUM COCKPIT RETHINK SYNTHESIS V0.1

English agent-read version / canonical execution guidance

Field	Value
Target repo path	IMPERIUM_NEW_GENERATION/DOCTRINARIUM/DOCTRINES/SANCTUM_COCKPIT_RETHINK_SYNTHESIS_V0_1_EN.pdf
Status	DOCTRINE_CANDIDATE - mandatory read-first input for NewGen Sanctum cockpit, dashboard action, visual gate, cleanup and Mechanicus Arsenal tasks
Source basis	Owner directive, commit 36df325 review, Deep Research/PDF, Speculum value-per-line audit, NewGen continuity summary
Core verdict	Do not blind-revert 36df325. Preserve the backend seed, clean/quarantine runtime dirt, then rebuild the visual cockpit around organs and evidence.

1. Purpose

This document records the doctrine direction for extracting IMPERIUM_NEW_GENERATION from the dirty state around commit 36df325e6cdfbf5cfe10a22ec969b97faa0853a8. It must be stored in Doctrinarium and read together with Gate Spine, Officio boot protocol, MetaOS / Organ Function Ownership doctrine, Important Six Organ Shell V1, dashboard L1/L2 reports, Speculum audit and Deep Research/PDF.

This is not an implementation task by itself. It is a doctrine/synthesis gate. Before any Servitor, Logos-Prime, Speculum or organ starts cockpit/action/dashboard/arsenal work, these rules must be accepted as read-first constraints.

2. Diagnosis of 36df325

- The commit has real backend/action value: local HTTP server, API, action registry, owner-intent schemas, diff decisions, dry-run transfer, smoke/Playwright, receipts and evidence.
- It is not accepted as a clean cockpit milestone: the organ center was lost, the screen became a generic action-card admin panel, and buttons became the product instead of organs.
- The commit contains too much generated/runtime/evidence footprint: source, runtime state, logs, screenshots, zips, sample decisions and repeated receipts are mixed in one review surface.
- The main technical risk is a second execution surface beside the existing verification spine instead of strict reuse of path_policy, command_gateway, receipt models and unified verdict semantics.
- The main visual risk is repeating the same pattern: backend works, but the operator surface degrades into a generic dashboard without a visual gate.

3. Doctrinarium binding verdict

Decision	Doctrine rule
No blind revert	36df325 contains a useful backend seed. It must be split, hardened and partially reused, not thrown away blindly.
No canon acceptance as-is	The L2 visual/operator surface is not Sanctum canon. It is a negative visual baseline plus backend action prototype.
Preserve signal	Keep action registry pattern, server/API seed, schemas, smoke/Playwright harness, representative reports, closure receipts and negative screenshot baseline.
Remove dirt	Quarantine repeated runtime/generated evidence; delete pid/log/cache/last-result junk unless explicitly packaged as final evidence.
Rebuild surface	The next cockpit must be organ-centered: organ shell grid first, Owner Decision Queue second, evidence/action history below, actions in secondary organ-owned drawer.

4. Target Sanctum cockpit law

A valid NewGen cockpit is not a button launcher. It is an operator-grade truth and control room for the Important Six organs.

Zone	Required meaning
Top truth strip	Current task, active route, blockers, repo/head state, health/verdict state, no-fake-green summary.

Zone	Required meaning
Center	Six organ shell panels / live shell snapshots: Doctrinarium, Officio Agentis, Administratum, Astronomicon, Mechanicus, Inquisition.
Right	Owner Decision Queue: questions generated by Servitor/organs/gates/audits, classified by jurisdiction, with receipts after Owner answers.
Bottom	Evidence, receipts, action history, diff/state timeline, visual gate status.
Secondary drawer	Organ-owned actions. Buttons are tools, not the product and not the first-screen metaphor.

5. Owner Intent correction

Wrong flow: Owner manually asks an organ a casual question as the primary workflow. This turns Owner Intent into a chat form and hides system responsibility.

Correct flow: Servitor, organ, gate or audit detects uncertainty -> classifies the question by organ jurisdiction -> creates an Owner Verdict Needed record -> cockpit displays the question in the queue -> Owner answers -> decision receipt is written -> Servitor continues only through the controlled protocol.

6. Cleanup and hardening law

Phase	Required action
Phase 1 - preserve signal	Keep backend action files, schemas, smoke/playwright harness, final reports, validation reports, closure receipt, negative baseline screenshot.
Phase 2 - quarantine noise	Move repeated action receipts, continuity builds, transfer intents, generated acknowledgements, sample owner decisions/notes and runtime histories to artifact/outbox/runtime zones.
Phase 3 - delete runtime junk	Delete server_pid.txt, server_stdout.log, server_stderr.log, action_last_results.json, duplicate click receipts, duplicate continuity builds and other cache/last-result files from canon.
Phase 4 - converge with spine	All writes must pass root/path policy; all subprocess execution must pass command gateway/allowlist; all receipts must validate against shared models.
Phase 5 - visual rewrite	Replace visual/operator layer with organ-centered cockpit skeleton and a formal visual screenshot gate.

7. Mechanicus Arsenal doctrine

Mechanicus Arsenal is now a strategic foundation, not a side wishlist. IMPERIUM must become highly functional by accumulating languages, tools, utilities, validators, UI frameworks, databases, search/indexing, algorithms, scripts, examples, adapters, OSINT/deep-research practices, visual regression tools and local-first sovereign tooling.

However, the Arsenal must not become a polluted tool dump. Every candidate follows the same admission chain.

candidate -> source/license/trust -> category -> owner organ -> sandbox/canon/quarantine -> install gate -> validation commands -> receipts -> registry

Law	Meaning
No Arsenal card	The tool does not exist for IMPERIUM.
No validation gate	The tool cannot become canon.
No receipt	The result of using the tool is not proven.
No organ owner	The tool is orphaned and should remain candidate/quarantine.

8. Immediate task route

Order	Task
0	Commit this Doctrinarium doctrine pack and require future agents to read it with existing laws.
1	TASK-NEWGEN-COMMIT-36DF325-CLEANUP-HARDENING-PC-V0_1 - split signal from dirt, delete runtime junk, quarantine generated burst, add commit-quality gates.
2	TASK-NEWGEN-MECHANICUS-ARSENAL-INTAKE-FOUNDATION-PC-V0_1 - create Arsenal folders, candidate card schema, validation receipt model and first category cards.
3	TASK-NEWGEN-SANCTUM-ORGAN-CENTERED-COCKPIT-SKELETON-PC-V0_1 - rebuild the cockpit around organ shell panels, Owner Decision Queue, evidence timeline and secondary action drawer.

9. Read-order command for future Servitors

Before any NewGen cockpit/dashboard/action/visual gate/Mechanicus Arsenal task, Servitor MUST read:

- This PDF: SANCTUM_COCKPIT_RETHINK_SYNTHESIS_V0_1_EN.pdf or RU version for Owner review.
- Doctrinarium Gate Spine / applicable visual and no-fake-green gates.
- Officio Agentis role/boot protocol and answer contract.
- MetaOS / Organ Function Ownership doctrine.
- Important Six Organ Shell V1 and dashboard L1/L2 reports.
- Speculum 36df325 value-per-line audit.
- Deep Research/PDF: Commit 36df325 and immediate Imperium hardening.
- Existing verification spine docs: path_policy, command_gateway, receipt models, verdict semantics.

10. Non-negotiable gates

- No fake green: a dashboard may not claim PASS if UI, backend, visual gate, schema enforcement or smoke semantics are partial/unproven.

- No action-card domination: first screen must show organs and system truth, not a grid of generic buttons.
- No manual-primary Owner Intent: Owner questions must be generated by system uncertainty and written with decision receipts.
- No committed runtime junk: pid/log/cache/last-result files do not belong in canon commits.
- No second execution spine: dashboard actions must converge on shared path policy, command gateway and receipt validation.
- No uncontrolled Arsenal install: tools enter through Mechanicus candidate cards and validation receipts.

Final ruling

This document authorizes the next phase: clean the 36df325 burst, preserve its backend value, enforce Doctrinarium gates, start Mechanicus Arsenal intake, and rebuild Sanctum as an organ-centered cockpit. The next implementation tasks must reference this PDF explicitly in their read-first list and final reports.
